

# Areas of Focus

What kind of innovation we are looking for in a partner

## Immunology

- Nephrology
- Rheumatology
- Gastroenterology, Respiratory
  - Innate
  - Fibrosis
  - Tolerance
  - Tissue Regeneration
  - Adaptive
  - Targets

## Oncology

- Oncogenic drivers
- Synthetic lethality
- Cancer immunotherapy
- Extracellular matrix to increase immune cell infiltration

## Cardio Metabolic Disease

- Metabolic disease
- Cardiovascular disease
- Cerebrovascular disease (eg. Stroke)
- Renal disease
- Atherosclerosis

## Research Technologies

- Molecular Glue Degradator
- Antibody Drug Conjugate
- Targeted, intracellular delivery
- Artificial intelligence for drug discovery
- Genomic Medicine platforms
- Novel modalities and enabling technologies to expand druggable target space

## Neuroscience

- Neurodegeneration (eg. Alzheimer's disease, Parkinson's disease, etc)
- Neuromuscular disorders (eg. Muscular Dystrophy, Becker's, Friedreich's Ataxia)
- Neuroinflammation

## Digital Health (Personalized Health)

- Robust data sets
- Advanced Analytics (artificial intelligence incl. machine learning and deep-learning models)
- Digital and mobile technologies

## Ophthalmology

- Retinal diseases (Age related macular degeneration, Geographic Atrophy, Diabetic Macular Edema, Diabetic Retinopathy)
- Glaucoma and dry eye disease
- Therapy for front of the eyes

**WHAT WE ARE FOCUSING ON**

- Potential for first- or best-in class molecules

---

- Novel targets

---

- Novel enabling modalities

---

- High disease burden

**WHAT WE ARE LOOKING FOR**

- Clear biology

---

- Consistent data

---

- Solid IP

---

- Biomarker strategy

Doing now what patients need next
